Epithelioma of the tongue.....	1	39
Total.....	14	

Annual rate of mortality per 1,000, 10.64. Estimated population, 48,000.

*Report from Santiago—Inspection of vessels—Case of yellow fever at Punta de Sal—Mortuary statistics.*

Acting Assistant Surgeon Wilson reports, October 25, as follows:

During the week ended October 22, 1904, bills of health were issued to 7 vessels bound for the United States.

No quarantinable disease was reported.

Under a separate cover I mail to-day a report of a case of yellow fever diagnosed as such on October 23. Yesterday I was informed about it and telegraphed to you.

On the bills of health issued (beginning with No. 170) I have noted this case and have written under remarks, "One case of yellow fever at Punta Sal, across the bay. Removed to lazaretto at Cayo Duan." I have reported the condition of the port as "good," as one case is not sufficient to declare the port infected.

Since writing my report I have found that the patient arrived at Santiago on September 23 by the steamship *Orizaba*; that he had come from Idaho, spending only a few days in New York.

*Mortuary report for the week ended October 22, 1904.*

Causes of death.	Number.	Bertillon number.
Tubercle of lungs.....	6	27
Cancerous cachexia.....	1	45
